

PALAU MÚSICA CATALANA  
BARCELONA

The main aim of the Palau de la Música Catalana, hereafter PMC, is the continual improvement of all its departments, activities and personnel who are trained to contribute to the prevention of environmental pollution, making regular assessments of the possible effects of our activity on the environment.

We have therefore implemented an environmental management system that commits us to maintaining and complying with it in accordance with existing legislation and other requirements that the organisation has signed, and to be able to face the daily challenges that we propose in order to improve and preserve our environment.

We aim to work towards the following:

- ✓ Control, regulate and reduce consumption of water and electricity.
- ✓ We are committed to reducing waste and pollutants to minimize, resource consumption and recycling of materials on all activities taking place in the PMC.
- ✓ Control and minimise environmental impacts.
- ✓ Provide our employees with appropriate information and training in relation to environmental aspects and their management, in so far as they may affect the project and meeting of objectives.
- ✓ Within this commitment, involve our subcontractors and suppliers in the PMC's environmental management activities.
- ✓ Inform and raise awareness amongst visitors to the PMC on the work that is being done and involve them in improving environment behaviour.

This environmental policy is the framework to be used to establish and review the objectives and aims of continual improvement and with it, the Palau de la Música Catalana wishes to contribute to improving the environment so that current society and future generations may enjoy it.

President  
Mrs. Mariona Carulla i Font

Barcelona, November 2012
